

CHALLENGER

The Challenger 1000 series is a multi-function, multi-purpose all-in-one compact and powerful portable sound system. Two versions are available, with built in anti-shock CD player or with built in cassette deck. The speaker system consists of a 10" full range speaker with a high frequency tweeter. The power supply consists of a switch mode 90-250V AC power supply and two heavy duty, maintenance free lead-acid type rechargeable batteries. The Challenger system can simply be operated with either AC power or the built in rechargeable batteries.

▲ Shockproof CD Player :
Single disc mechanism.
Quick search function.
Repeat play function.
Memory programming.

▲ Tape Deck
Playback and record functions.
Variable tape speed control.
Auto Reverse function.
APSS (Automatic Program Search)

▼ Neutrik XLR / Phono Combo connector

Inputs: MIC IN x 2, LINE IN
(Neutrik XLR / Phono Combo connector)
Mode selector (Speech or Music)
Outputs: LINE IN / OUT, ACTIVE OUT
Controls: MIC IN Vol, Tape / CD
Power/Vol., Line Vol.
Tone, Master Vol.

▲ 90-250 V AC (150W) Switching Power Supply
External Speaker connection with Speaker OUT (switched / unswitched)
Power ON/ OFF switch
Voice Priority ON/ OFF switch
Battery charging status indicator

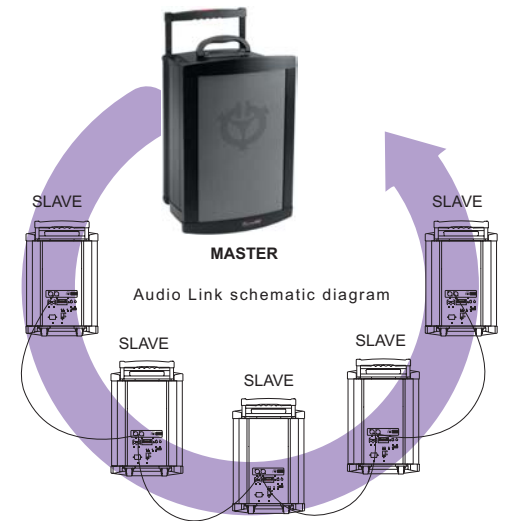

▲ Slots for two plug in type receiver modules.
Modules available are :
UHF PLL type with or without LCD.
Separate receiver volume control.

▼ SDR-700M/SDR-916M (16 Channels)

Audio Link

Audio Link allows the inter-connection of a master Challenger 1000 unit with up to 20 powered slave units to form a large network of amplified speakers. In order to do this, the master unit with the audio sources (wireless mic, wired mic, cassette or CD) is connected to the slave unit via the ACTIVE OUT connector. The ACTIVE OUT of the slave is then connected to the ACTIVE IN of the next slave and so on if more slave units are required.

Advantages of Audio Link

Expandable & Flexible : The Challenger can work as a single unit or be expanded to a large network of amplified speakers for larger crowds.
